

**Spotted hyaena sighting and
photographic record sheet**

As the human population grows all over Africa and urban areas expand, hyaenas' and humans come into frequent contact. Wild Dog Conservation Malawi is currently researching the previously unstudied hyaenas in Lilongwe in order to assist with conflict management and mitigation to promote co-existence between carnivores and people in the city. To do this we need your help!. If you see or have seen any hyaenas in the city you can help us by completing a sighting sheet as fully and accurately as possible. Photos and videos are also greatly appreciated as we can use these to identify individual hyaenas.

SIGHTINGS SHEET

Date: Time:

Area number:

Location (road name, nearby landmark, GPS):.....
.....

Type of location (road, next to a house, wilderness areas,...):.....
.....

Total number of hyenas:

Number of adults: Number of pups:

Activity of the hyena when sighted: Walking / Resting / Eating
(specify):.....

Other notes:

Any photos or video taken? YES/NO

Name: Email:
